

FOIL BOARD[®]

INSULATION PANEL

The smarter way to insulate

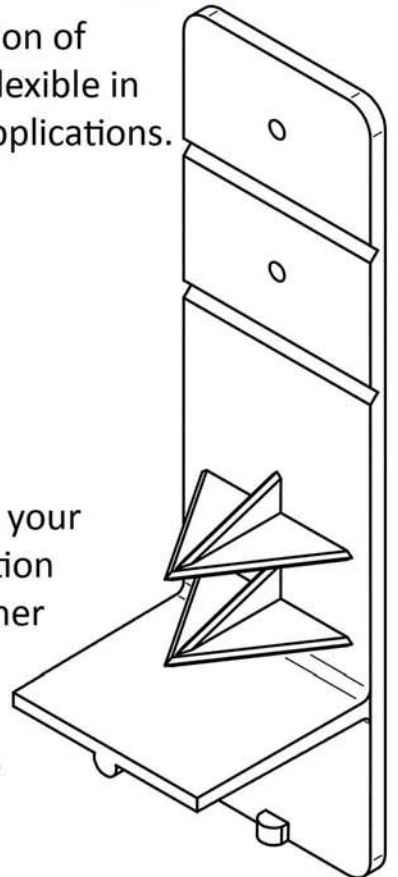

Introducing our new Flexifast Fastening System

Flexifast[®] is our new fastening system that will simplify your installation of Foilboard[®]. This unique new fastener is not only fast and extremely flexible in its use, but also adjustable, making it the perfect solution for many applications.

- *Factory Roof C-Section Purlin
- *Steel & Timber Floor Joists
- *Internal Walls
- *Cathedral Beams
- *Double Layering

Simply push the Flexifast[®] fastener firmly into the desired position in your Foilboard[®] sheet, using the specially designed prongs, and then position the board where it is required, fasten the Flexifast[®] fastener with either nails or screws where appropriate.

Foilboard[®] recommends the use of 6 Flexifast[®] fasteners per board for maximum stability. To finish the perfect installation of Foilboard[®], all sheets must be taped where they join to prevent air infiltration, therefore maintaining your desired R-Value.
